Objects (3)

Objects are the fundamental entities stored in Amazon S3. You can use [Amazon S3 inventory](#) to get a list of all objects in your bucket. For others to access your objects, you'll need to explicitly grant them permissions. [Learn more](#)

Find objects by prefix

Name	Type	Last modified	Size	Storage class

Buckets

arnav-kumar-static-website

Successfully edited bucket policy.

Block public access (bucket settings)

Public access is granted to buckets and objects through access control lists (ACLs), bucket policies, access point policies, or all. In order to ensure that public access to all your S3 buckets and objects is blocked, turn on Block all public access. These settings apply only to this bucket and its access points. AWS recommends that you turn on Block all public access, but before applying any of these settings, ensure that your applications will work correctly without public access. If you require some level of public access to your buckets or objects within, you can customize the individual settings below to suit your specific storage use cases. [Learn more](#)

Block all public access

OFF

Individual Block Public Access settings for this bucket

Bucket policy

The bucket policy, written in JSON, provides access to the objects stored in the bucket. Bucket policies don't apply to objects owned by other accounts. [Learn more](#)

Everything you need for a simple monthly price

- Plans include global CDN, WAF, DDoS protection, DNS, TLS certificate, log ingestion, and serverless edge compute.
- No overage charges.
- Blocked requests and DDoS attacks never count against your usage allowance.
- Data transfer costs from your AWS origins (such as Amazon S3, Application Load Balancer, or API Gateway) to CloudFront are automatically waived.

AWS Static Website Hosting Project

Student Name: Arnav Kumar Singh

S3 Website Endpoint URL:

<http://aarush-static-website.s3-website-ap-south-1.amazonaws.com>

CloudFront URL:

<https://d3f4abcd1234.cloudfront.net>

Description:

This project demonstrates how to deploy a static website using AWS S3 and CloudFront.

Steps completed:

1. Created S3 bucket
2. Uploaded HTML, CSS, and JavaScript files
3. Enabled static website hosting

4. Configured bucket policy for public access
5. Created CloudFront distribution
6. Verified website accessibility through S3 and CloudFront

Files Included:

- Screenshots of all steps
- README.txt
